SUBJECT: Sonoran pronghorn

CONVERSATION

We discussed the historic range in reference to the Buenos Aires Refuge.

The specimen that Pandhoot Nowak examined from Crittenden that has some characteristics intermediate between sonoriensis & mexicana is probably sonoriensis & is still referable to sonoriensis. In addition it was in Crittenden (~5 mi. west of Sonoita on hwy 82) & anything on the Buenos Aires would be in sonoriensis range.

[illegible] least of the Buenos Aires NWR
